# FOR PARTNERING FOR CURES

CONVENE  
INSPIRE  
CHANGE

FASTER CURES A CENTER OF THE MILKEN INSTITUTE

Since 2009, Partnering for Cures has been bringing together leaders with the experience, creativity, and motivation needed to transform the biomedical research system.

Hosted by *FasterCures*, a center of the Milken Institute, Partnering for Cures connects decision-makers from across diseases who are motivated by the same mission: to reduce the time and cost of getting new therapies from discovery to patients. For 2017, *FasterCures* is taking Partnering for Cures on the road and convening smaller, cross-sector groups of R&D leaders in two hotbeds of biomedical innovation – Boston on July 12 and San Francisco on Nov. 14.

Each Partnering for Cures meeting will bring together 250 innovators from across medical research:

- Life science investors, philanthropists, and wealth advisors
- Biotechnology, pharmaceutical, and insurance company executives
- Patients and medical research foundation innovators
- Academic medical center leaders and researchers
- Government decision-makers, federal funders, federal researchers, and regulatory policy-makers

Both meetings will feature expert speakers on topics including patient centricity, the future of medical R&D, data science, and much more! Attendees should prepare to find new partnerships, discover patient-centered solutions, tackle R&D challenges, and be inspired by powerful, personal stories.
